SECURE YOUR ORGANIZATION'S CLOUD

With CDW and AWS

About CDW's Offering

CDW's Security Workshop is designed to help organizations better understand the security features and best practices of the AWS platform. These security discussions are led by our AWS experts who have a deep understanding of AWS's security features and can provide guidance on how to implement them effectively.

The CDW AWS Security Workshop typically covers a range of topics, including identity and access management, network security, data protection, and incident response. This may also include hands-on whiteboard exercises to help participants understand how to implement security controls in the AWS environment.
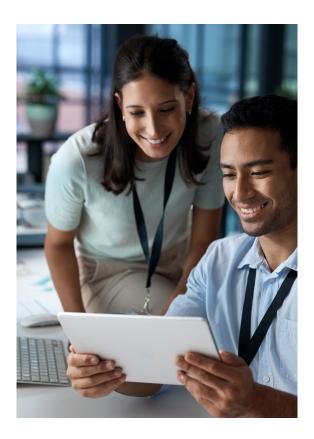

Benefits

Tailored To Your Needs
Workshops can be tailored to look at Greenfield deployments to AWS, organizations looking to migrate workloads to the first time, or by mature AWS customers to ensure their security posture in the cloud aligns to industry standards.

Organizational Awareness
Organizations can utilize this excellent opportunity to learn from our AWS experts and gain a better understanding of how to secure their AWS environments. By participating, organizations can improve their security posture and reduce the risk of security breaches.

Accelerate Innovation
