Unleash the power of data

Elevating your decision-making with
Snowflake, AWS, and CDW

Snowflake Rapid Deployment offer

Snowflake is the data cloud platform that enables data storage, processing, and analytic solutions, offering a flexible and scalable environment for data-driven decision-making.

This offering involves a thorough process for the planning, design, and implementation of a production-ready, foundational Snowflake environment. It leverages industry recommended practices to ensure a fully operational deployment. The service includes in-depth consultation, expert guidance, and actionable recommendations for various aspects of the Snowflake setup.

Key benefits

Time Efficiency
The streamlined implementation process ensures quick setup of the Snowflake environment, enabling businesses to leverage their data sooner.

Cost Savings
Reduced time and resources spent on installation and configuration lead to notable financial advantages for the organization.

Risk Mitigation
The well-defined, tested process decreases potential for errors, ensuring safer and more reliable setup of the data warehousing environment.

Business Agility
The rapid setup allows businesses to swiftly adapt to changing needs or market conditions, maintaining competitiveness and responsiveness to opportunities or challenges.

Why CDW?

Certifications
CDW has 100-plus AWS certifications. We get AWS!

Span
CDW has thousands of engineers with experience in hundreds of technologies. We can help wherever you need it most. We get IT!

Comprehensive
CDW can support your business in all phases for cloud; from the Well-Architected Review to remediation, to management, migration, data center optimization, hardware and more. We get Business!

Experience
CDW knows your business and we know you. Your account manager will be with you every step of the way and your CDW terms can be used for any technological path to improvement this may take us.

Snowflake Cloud Data Platform can be rapidly deployed on AWS

Snowflake on AWS provides organizations with a powerful and reliable cloud infrastructure that supports data storage, processing, and analytics needs, while also benefiting from the scalability, performance, security, and integration capabilities offered by AWS. Easily discover and securely share, governed data, and execute diverse analytic workloads.

How it Gets Done

CDW will work with you to plan and design the configuration of the Snowflake environment. CDW will provide advice based on experience, CDW recommended practices, and AWS recommendations as appropriate to Customer's cloud environment.

Learning
- Document of business objectives
- Workshop overview
- Q & A
- Statement of work

Initiation
- Project kickoff
- Identification and scheduling of stakeholder sessions

Collaboration
- Delivered over 3 weeks
- Planning
- Solution Design
- Implementation
- Weekly status reports

Outcome
- Configuration plan
- Snowflake foundations deployed
- Project completion report
